PROFILE

Licensed Doctor of Chiropractic experienced in individualized acute, chronic, rehabilitative, athletic-performance, and maintenance care. Patient populations include children, pregnant and postpartum patients, athletes, older adults, and veterans.

Adjusting-centered provider with strong emphasis on **diversified spinal and extremity adjusting**, patient education, treatment-plan progression, clinic flow, and continuity of care. Trusted to step into **interim clinical lead and sole-provider responsibilities** during unexpected provider absences, managing patient care, staff coordination, documentation, and clinical decision-making in a fast-paced outpatient setting.

Known for quickly building patient trust, creating strong patient relationships, and communicating clinical recommendations in a way patients understand, value, and follow. Skilled at increasing **patient education** for treatment plans, rehabilitation, supportive therapies, home care, and in-office products while keeping recommendations clinically grounded and patient-centered.

CHIROPRACTIC EXPERIENCE

Interim Clinical Lead

Mansfield Chiropractic Clinic - Mansfield, TX
January 5th - July 31st, 2026

- Delivered an estimated **2,000+ outpatient patient visits** in a high-volume chiropractic clinic averaging **approximately 150-200 patient visits/wk**.
- **Entrusted with interim clinical lead and sole-provider responsibilities** during an unplanned doctor absence, then continued as **lead/sole treating provider** during unexpected absences after his return — managing patient care, clinic flow, documentation, staff coordination, and clinical decision-making while maintaining continuity of care.
- Practiced in a large **two-doctor, multi-staff clinical environment** with two exam rooms, four adjusting tables, a physical therapy/rehabilitation bay, DRX spinal decompression, passive therapy modalities, and manual adjusting.
- Sustained efficiency and care quality when the clinic compressed from **four treatment days per week to three**, adapting to a denser schedule while maintaining patient flow and treatment-plan progression.
- Managed and delivered **high-volume manual care** across a recurring outpatient caseload of acute, chronic, rehabilitative, personal injury, and maintenance-care patients, with **diversified spinal and extremity adjusting** as the foundation of care.
- Treated a **clinically diverse patient population**, including patients with severe scoliosis, osteoporosis, fibromyalgia, osteogenesis imperfecta, Marfan syndrome, amputations, burn history, pediatric patients, geriatric patients, athletes across the age span, and perinatal/postpartum patients.
- Educated and built buy-in for clinically recommended care, including **treatment plans, rehabilitation, DRX spinal decompression, passive therapies, durable medical equipment, and home-care recommendations** when clinically appropriate.
- Coordinated, documented, and delivered care for **cash, insurance, and personal injury** patients while maintaining quality in a fast-paced clinic environment.

Clinical Rotations

13-week outpatient care

- Built and managed an independent outpatient caseload, delivering 276 patient treatments during a 13-week outpatient rotation while limited by clinic protocols to one patient per hour.
- Maintained a consistently full schedule of approximately 21+ visits per week, demonstrating initiative, strong communication skills, and early clinical efficiency.
- Treated a clinically diverse caseload, including veterans and patients with complex presentations such as post-cauda equina syndrome, traumatic brain injury history, cerebellar involvement, osteoporosis, and above-the-knee amputations with and without a prosthetic fitting.
